Colorado Parks and Wildlife is pleased to announce a new app for helping with creating and evaluating seed mixes in Colorado. In a few seconds, the tool will produce a list of adapted species based on your site's characteristics and management goals.

In this webinar, you will learn how it works and how to use it for your goals.

Speakers

Danielle Neumann:

Dani Neumann is a Northwest Region Land Use Specialist for Colorado Parks & Wildlife. She analyzes development impacts on wildlife and fisheries; assists with designing wildlife mitigation and management plans; and collaborates with stakeholders on long-term community strategies to balance growth and conservation. Dani is a 2017 Prescott College graduate and began her CPW career in 2016 with the fisheries section. She owns a small farm with her husband in Eagle County and spends her free time horseback riding, hiking, traveling, skiing, and snowshoeing.

Danielle Johnston:

Dr. Danielle Bilyeu Johnston has worked for Colorado Parks and Wildlife researching ways to improve habitat since 2007. Her favorite projects involve testing new tools for restoration, often borrowing ideas from agriculture. She holds a PhD in Ecology from Colorado State University. She lives in Rifle with her husband and two kids, and enjoys gardening, reading, and hiking in her spare time.
